

Define Problem Statements (Customer Problem Statement)

Date:	3 October 2026	Team ID:	UNM1611SHARVESHAM
Project Name:	AI BlogNest API	Maximum Marks:	3 Marks

Customer Problem Statement Framework:

A well-articulated customer problem statement allows the team to pinpoint exact challenges faced by digital writers, developers, and platform users. Throughout this process, we empathize with users who need fast, structured content creation without tedious manual writing or complex API setup.

I am	I'm trying to	But	Because	Which makes me feel
Content Creator & Web Developer	Generate high-quality blog posts rapidly via API	Manual writing is slow & lacks REST integration	Existing tools are closed & lack clean JSON APIs	Frustrated & seeking a lightweight GenAI engine

Structured Problem Statements:

PS No.	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Content Creator / Technical Writer	Draft high-quality, structured articles on various topics in seconds	Manual research and drafting take 4-6 hours per article	Writer's block and repetitive content structuring drain creativity	Exhausted, pressured by daily publishing schedules
PS-2	Full-Stack Web / Mobile Developer	Integrate AI content generation into client web/mobile applications	Raw LLM APIs require prompt tuning, text cleanup, and auth boilerplate	Most AI wrappers lack turnkey REST endpoints with DB persistence	Frustrated by boilerplate and eager for a clean REST API
PS-3	Blog Reader / Newsletter Curator	Digest long-form technical blogs rapidly to extract key takeaways	Reading multiple 2000-word articles daily causes information overload	Manual summarization is tedious and easy to miss core insights	Overwhelmed and seeking instant, reliable executive summaries
