

Problem-Solution Fit Canvas

Date:	3 October 2026	Team ID:	UNM1611SHARVESHARAM
Project Name:	AI BlogNest API	Maximum Marks:	5 Marks

Problem-Solution Fit Canvas:

Use the canvas framework below to validate that AI BlogNest API directly resolves user bottlenecks, addresses root causes, and provides compelling value over existing alternatives.

1. CUSTOMER SEGMENTS [CS] - Tech Bloggers & Independent Authors - Content Marketing Teams & Copywriters - Full-stack Developers needing AI content APIs - Newsletter Curators & Knowledge Workers	6. CUSTOMER LIMITATIONS [CL] - Limited budget for enterprise AI subscriptions - Need standard JSON REST endpoints - Minimal infrastructure setup requirements - Strict data privacy & author security needs	5. AVAILABLE SOLUTIONS [AS] ChatGPT / Jasper: High monthly fee, no developer REST CRUD endpoints. WordPress / Medium: Good CMS, but zero native GenAI generation API. Custom Scripts: Fragmented, no security.
2. PROBLEMS / PAINS [PR] - Writer's block & slow drafting (Daily) - High cost of commercial AI tools (Ongoing) - Messy formatting & manual cleanup (Daily) - Complex LLM API integration (Frequent)	9. PROBLEM ROOT CAUSE [RC] - Manual content drafting is inherently labor-intensive. - Existing LLM APIs provide raw completions without database persistence, auth security, text cleanup, or domain categorization.	7. BEHAVIOR & INTENSITY [BE] - High frequency: Generates 3-10 articles/week - Iterative refinement of prompt topics - Constant review and summarization of text - Integration into client frontends & blogs
3. TRIGGERS TO ACT [TR] - Impending publishing deadlines - Need for instant blog summaries - Building content-driven web apps - Demand for automated content scaling	10. YOUR SOLUTION [SL] AI BlogNest API: An integrated, production-ready RESTful backend providing Google Gemini 1.5 Flash blog generation, text summarization, auto-categorization, and JWT-secured MongoDB CRUD.	8. CHANNELS OF BEHAVIOR [CH] Online: REST API calls via Thunder Client, Postman, Web Apps, GitHub. Offline: Editorial reviews, sprint demo presentations, project reviews.
4. EMOTIONS [EM] Before: Stressed, overwhelmed, frustrated with manual writing. After: Empowered, productive, confident with instant AI generation.	KEY VALUE PROPOSITION: Turnkey GenAI backend combining Google Gemini 1.5 Flash with complete author-isolated MongoDB CRUD in under 2 seconds latency.	SUCCESS METRIC: 96% reduction in article drafting time; 100% test pass rate across Thunder Client suite.
