

Empathy Map Template

Date:	3 October 2026	Team ID:	UNM1611SHARVESHGRAM-SWTID-2026-8110
Project Name:	AI BlogNest API	Maximum Marks:	4 Marks

Empathy Map: User Persona Analysis

An empathy map enables the team to understand our primary user persona from four perspectives — what they **Say**, **Think**, **Do**, and **Feel** — to ensure AI BlogNest API solves real pain points in digital content workflows.

TARGET PERSONA: Alex Rivera | **ROLE:** Independent Tech Blogger & Developer | **GOAL:** Rapid AI-assisted publishing with secure API access

SAYS: • "I need to publish technical articles consistently, but writing takes too long." • "Why can't I just call a simple API with a topic and get a clean, ready blog post?" • "I want clean plain-text blogs without messy markdown asterisks or headings." • "I need an endpoint to summarize lengthy articles for my newsletter subscribers."	THINKS: • "Is Gemini 1.5 Flash fast enough to generate quality articles in under 2 seconds?" • "Can the system automatically detect categories so I don't have to tag manually?" • "My published articles must be secure: other users should never edit or delete them." • "I want a clean REST architecture using Node.js and MongoDB that I can scale."
DOES: • Researches trending topics on GitHub, Reddit, and developer portals. • Tests API endpoints using Thunder Client and Postman with Bearer tokens. • Sends requests to `/api/ai/generate-blog` to obtain instant drafts. • Manages the full lifecycle of articles: creation, viewing, updating, and deleting. • Triggers `/api/ai/summarize` to extract executive summaries for quick reads.	FEELS: • Overwhelmed when facing tight publishing deadlines and creative fatigue. • Relieved and empowered when Gemini produces an accurate 150-word guide instantly. • Confident knowing JWT authentication secures user accounts and blog ownership. • Excited to integrate the AI BlogNest API into mobile and web client frontends.
